0xcafebabe

Is Java the New Cobol?
(hopefully)

Twitter, Azul are working
on openJDK

IDEs, Tools and Libraries

Easy To Learn

Not Many Surprises

VooDoo Is Hard To
Achieve (Boring)

**There Are No "Famous
One Liners"**

**Really Hard To Obfuscate
(Commercial Tools are
Available)**

There Are No "International
Obfuscated Java Code
Contest" (www.iocccc.org)

Performance

Startup

JMX

```
MBeanServer mbs =  
ManagementFactory.getPlatformMBeanServer();
```

```
String  
compositeName="hello:type=com.abien.hello";
```

```
ObjectName mbeanName= new  
ObjectName(compositeName);
```

```
this.mbs.registerMBean(mbean,mbeanName);
```

Aspects (Dynamic Proxy)
...since JDK 1.3

```
public class TracingInvocationHandler implements InvocationHandler{

    public Object invoke(Object proxy, Method m, Object[] args) throws Throwable {

        result = m.invoke(obj, args);

    } catch (InvocationTargetException e) {

        throw e.getTargetException();

    } catch (Exception e) {

        //infrastructure exception

    } finally {

    }

    return result;

}
```

```
Proxy.newProxyInstance(  
    classLoader,  
    allInterfaces,  
    handler);
```

Plugins (ServiceLoader)

java.util.ServiceLoader

- Searches for implementations for an interface (from meta-inf/services).
- Instantiates lazily the realization and caches the products.
- Uses generics – is convenient to use.
- NetBeans RCP is based on it...

```
ServiceLoader<S> loader =  
ServiceLoader.load(clazz);
```

```
for (Iterator<S> it = loader.iterator();  
it.hasNext();) {  
  
    ... it.next();  
}
```

```
HelloService service =  
LoaderUtility.load(HelloService.class);
```

Content of the configuration file:

```
com.abien.HelloWorldService
```

```
ServiceLoader<Compressor> loader =  
load(Compressor.class);
```

```
for (Iterator<Compressor> it = loader.iterator();  
it.hasNext();) {
```

```
    S impl = it.next();
```

RMI

```
public interface HelloWorldService extends  
Remote{
```

```
    public String helloFromServer(String  
        greeting) throws RemoteException;  
}
```

```
public class HelloWorldServant extends
UnicastRemoteObject implements HelloWorldService{

protected HelloWorldServant() throws
RemoteException {
    super();
}

public String helloFromServer(String greeting) {
    return greeting + " time: " + new Date();
}
}
```

```
HelloWorldService h = (HelloWorldService)  
Naming.lookup("rmi://localhost:1200/hugo");
```

```
String msg = h.helloFromServer("hello ");
```

XML Processing

XML Processing

- Stax
- JAXB
- XMLEncoder / XMLDecoder

```
XMLEncoder e = new XMLEncoder(new  
FileOutputStream("Test.xml"));  
  
e.writeObject(new JButton("Hello, world"));  
  
e.close();
```

Scripting

```
ScriptEngineManager se = new ScriptEngineManager();  
  
    se = engineManager.getEngineByName("JavaScript");  
  
    Object retVal = null;  
  
    Bindings bindings = new SimpleBindings();  
  
    bindings.put("digit", 21);  
  
    retVal = se.eval(21*2,bindings);  
  
    return (Double) retVal;
```

DerbyDB

Logging

Concurrency

Java FX 2

Jigsaw, Lambda Expressions

New NIO

WORKS IN JDK 1.6!

//Z means: "The end of the input but for the final terminator, if any"

```
String output = new Scanner(new  
File("file.txt")).useDelimiter("\n  
Z").next();
```

```
    System.out.println("" + output);
```

```
import static java.nio.charset.Charset.*;
import static java.nio.file.Files.*;
import static java.nio.file.Paths.*;

public class FileReader {

    public static void read(String file) throws IOException{
        List<String> allLines = readAllLines(get(file), defaultCharset());
        for (String line : allLines) {
            System.out.println(line);
        }
    }

    public static void main(String[] args) throws IOException {
        read("./readme.txt");
    }
}
```

```
import java.io.BufferedReader;
import java.nio.charset.Charset;
import java.nio.file.Files;
import java.nio.file.Path;
import java.nio.file.Paths;
```

```
    Path file = Paths.get("./readme.txt");
    BufferedReader reader =
Files.newBufferedReader(file, Charset.defaultCharset());
    StringBuilder content = new StringBuilder();
    String line = null;
    while ((line = reader.readLine()) != null) {
        content.append(line).append("/n");
    }
    System.out.println("Content: " + content.toString());
```

Fluenza

```
import static org.mockito.Mockito.*;

RentalService cut;

@Before

public void initDI(){

    cut = new RentalService();

    cut.cv = mock(CustomerValidation.class);

}

@Test(expected=IllegalArgumentException.class)

public void buy() {

    when(cut.cv.cashAmount(anyInt())).thenReturn(false);

    cut.buy("tesla");
}
```

training.login("adam","bien").

running().

today().

averagePulse(135).

comment("ok").

duration(0,65,1).

maxPulse(165).

distance(12).

wasRace().

weather(SUN).

add();

With A Little Help Of EE

[GoF] Observer

```
@Inject Event<Vehicle> events;
```

```
events.fire(new Vehicle());
```

```
//-----
```

```
void onReportedVehicle(@Observes Vehicle  
vehicle){ }
```

Scheduler

```
@Schedule(hour="*",minute="*",second="*/5")  
public void flushCache(){}  

```

Asynchronous Processing

@Asynchronous

```
public Future<String> assemble(Vehicle v){}
```

[GoF] Factory

@Produces

```
public String getConfiguration() {}
```

[GoF] Decorator

@AroundInvoke

```
public Object audit(InvocationContext ic)  
throws Exception{
```

```
    Method method = ic.getMethod();
```

```
    System.out.println("AUDIT: " + method);
```

```
    return ic.proceed();
```

```
}
```

[GoF] Typesafe Decorator

```
public class NiceMessenger implements  
Messenger {
```

```
    @Override
```

```
    public String morning(){
```

```
        return "morning";
```

```
    }
```

```
}
```

[GoF] Typesafe Decorator

@Decorator

```
public abstract class NicenessExtender implements Messenger{
```

```
    @Inject @Delegate
```

```
    private Messenger messenger;
```

```
    @Override
```

```
    public String morning() {
```

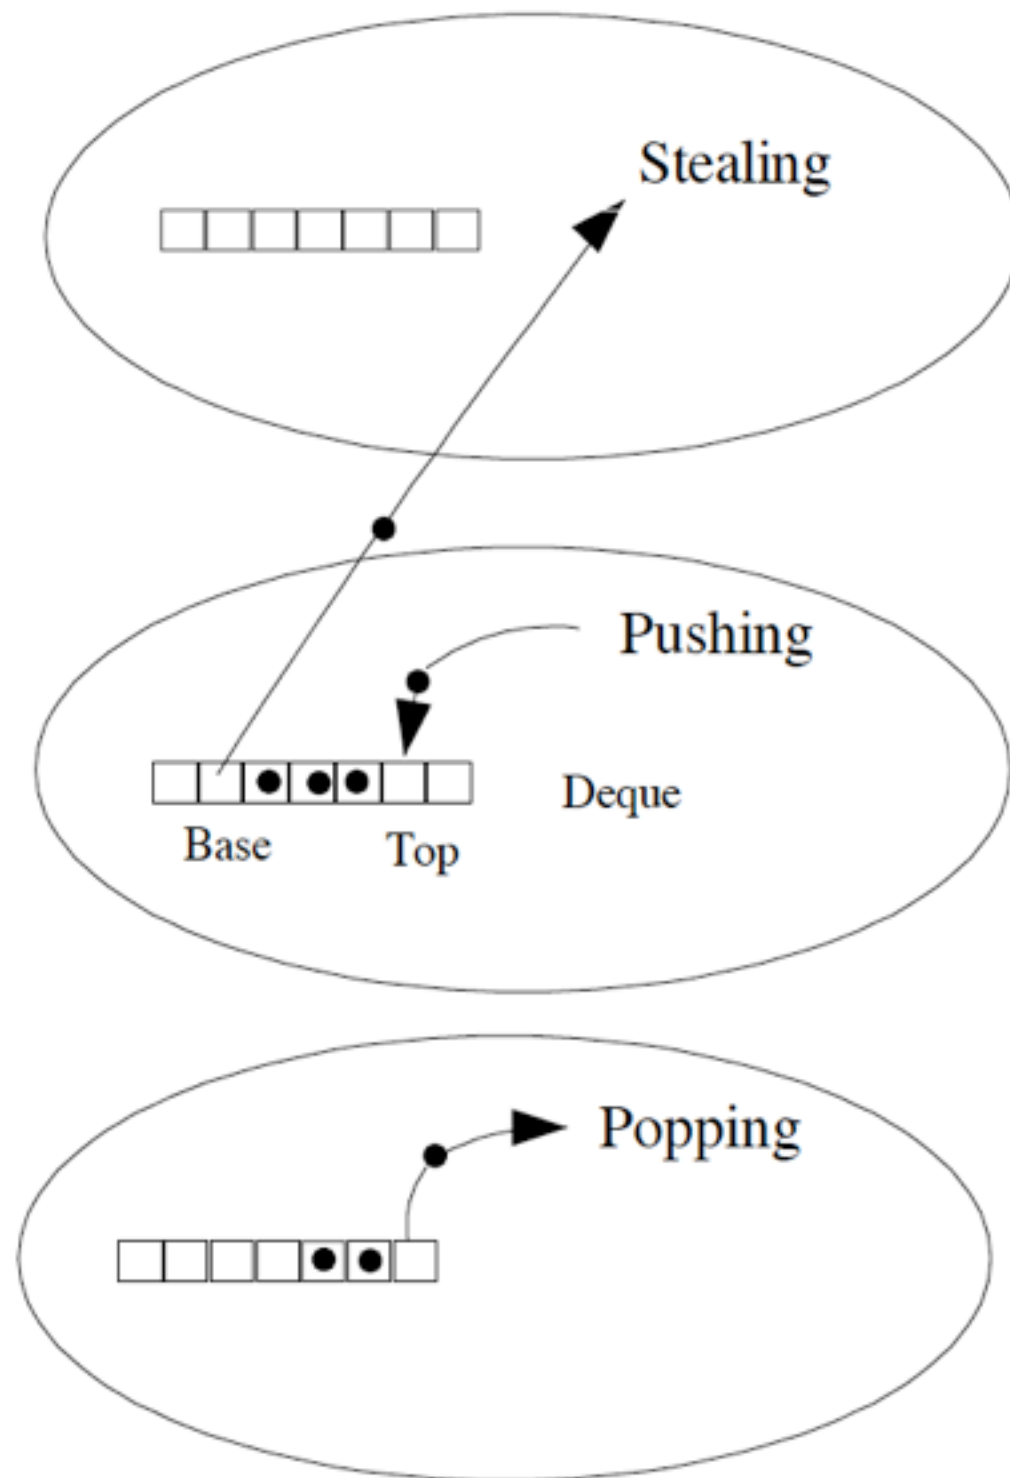

```
        return "Good " + messenger.morning();
```

```
    }
```

```
}
```

ForkJoin

```
Result solve(Problem problem) {  
  
    if (problem is small)  
  
        directly solve problem  
  
    else {  
  
        split problem into independent parts  
        fork new subtasks to solve each part  
        join all subtasks  
        compose result from subresults  
  
    }
```

Stolen from Doug's Lea Paper :-)

Thank You!
